Integrated Clinical Systems, Inc. launches JReview 11 - introducing interactive & user-driven clinical data analytics

Frenchtown, NJ - December 10, 2014

Integrated Clinical Systems, Inc. (ICS) www.i-review.com, developers of Integrated Review™ & JReview®, the world's most comprehensive clinical review and analysis software tool, today announced the launch of JReview version 11.

For this new JReview release the major focus has been significant enhancements in intuitive reporting object design. JReview objects, such as graphs, reports, or crosstabs can be defined in a newly designed drag-and-drop user interface providing immediate preview of results.

"With JReview 11 we wanted to introduce a state of the art analytics user interface allowing object designers to dynamically define reporting objects in a drag-and-drop environment" says Eric S. Herbel, President of ICS. "New objects can now be designed by just dragging panel items onto a graph, report, or crosstab to set axes and by-variables, or to add legends and dynamic filter elements for safety experts to define patient characteristics. Each of these definition areas display previews of the output for further refinement before saving and sharing the object definitions, as well as publishing them as a dashboard at project, or study level. At ICS we have been closely observing market trends in business analytics, and user-driven data exploration is clearly becoming a game-changing paradigm in modern data analytics. We are happy to say that with JReview 11, professionals in clinical development and pharmacovigilance can now also benefit from such technology advances."

Another new concept introduced with JReview 11 are *vertical to horizontal panels*. Typically (especially in [CDISC SDTM](#)), data domains such as labs or vital signs are stored in a vertical structure which is not ideal for visual analytics purposes. Once a panel/domain has been defined as a vertical structure, JReview 11 displays the lab category and lab tests, for example, as if they were normal columns in the domain so users can easily select panel items to define new reporting objects, regardless of the underlying data structure.

About JReview®

JReview® is the fastest, easiest way to review, graph, report, and analyze your clinical data. It is a web-enabled software application written specifically for pharmaceutical, biotech and medical device companies doing clinical research. It provides many vital tools needed to perform clinical data review, ad hoc reporting, data visualization, analysis, and risk assessment of clinical studies data. By interacting with various patient subsets and using any combination of browser modules or dashboards within the product, users can easily review and/or monitor their clinical trials for safety, efficacy, etc.

About Integrated Clinical Systems, Inc.

Integrated Clinical Systems, Inc. (ICS) <http://www.i-review.com>, headquartered in Frenchtown, NJ, is an industry-leading developer of software applications for pharmaceutical, biotech and medical device

companies worldwide. Their original software application, Integrated Review™, provides ongoing, real-time review of clinical data and an easy-to-use, intuitive means of profiling patients, reporting, graphing, ad-hoc data mining and signal detection for clinical data stored in third-party or in-house data management software systems or data warehouses. This functionality has been ported to a web-enabled software application, JReview®, and has been expanded even more with new features. These products have been developed by professionals from the pharmaceutical industry, and they continue to be refined and enhanced by customer and FDA feedback. It is this specialization and industry focus that provides their clients with the reporting and analysis capabilities that allow them to bring products to the market safely, efficiently, speedily and cost effectively.

Integrated Review™ is trademarked and JReview® is a registered trademark of Integrated Clinical Systems, Inc. Copyright © 2014. All rights reserved.
